Recent stroke?

Researchers at Penn State Milton S. Hershey Medical Center are researching a new therapy to prevent recurrent stroke and myocardial infarction (MI) in non-diabetic patients with recent stroke or transient ischemic attack (TIA). This research study, called IRIS (Insulin Resistance Intervention After Stroke) is a National Institute of Neurological Disorders and Stroke, National Institutes of Health clinical trial.

You may be eligible to participate if you are:

- a man or woman or women with an ischemic-type stroke or TIA within the past 6 months ,
- age 40 years or older,
- non-diabetic,
- able to communicate and participate in follow-up,
- insulin resistant as determined by a special blood test.

For more information, contact Kim Hitz, R.N., 717-531-3779 or www.IRISTRIAL.org
