## Certificate Verification

When setting up Outlook for Mac, you will be asked about a certificate and will have three (3) options: "Show Details," "Continue," or "Cancel."

Click "Show Details."

In the next window, there will be a check box to always trust this certificate. Be sure to check that box and click, "Continue."

You will be asked for your computer password to verify. Once accepted, Outlook should synchronize your mailbox, and should no longer have certificate issues.
