

COSMETIC SERVICES

Penn State Dermatology is pleased to offer patients comprehensive skin care. We have recently expanded our services to include the following procedures at the **Cosmetic Clinic located at 35 Hope Drive**.

Botox (Botulinum toxin)

Uses: treat wrinkles including glabellar lines (frown lines), crow's feet, and forehead lines.

How it works: Botulinum toxin therapy involves the injection of a small amount of the medication into the target muscles. The medication relaxes the muscle resulting in decreased wrinkles. The effects of Botox become apparent within one week and will last for 3-4 months. With repeated treatments, the effects may last even longer.

Persons with a history of a neuromuscular disorder such as myasthenia gravis or amyotrophic lateral sclerosis should not pursue this therapy. Likewise, pregnant or lactating females should not receive botulinum toxin.

Restylane®, Juvederm® and Preville® (Hyaluronic acid fillers)

Uses: Hyaluronic acid injections can be used as a filler to improve the skin's contour and augment deeper wrinkles. Facial lines and features that can be corrected include frown lines, smoker's lines, marionette lines, crow's feet, nasolabial lines or smile lines, lips, and some facial scars.

How it works: Hyaluronic acid implantation is not permanent. Once injected into the skin it will gradually break down and be absorbed by the body. In most cases, the augmentation lasts anywhere between 3-9 months.

Appointments: Cosmetic services offered one evening monthly at the **Cosmetic Clinic located at 35 Hope Drive**. Appointments can be made either at check-out or by calling the Cosmetic Center at **(717) 531-1386**.
