

# Diagnosed with irregular heart beat?

Researchers at Penn State Hershey Heart and Vascular Institute are comparing drug therapy to ablation therapy in those that have atrial fibrillation (irregular heart beat).

Who may be eligible to participate in this research study?

- Age greater than 65 or less than 65 with known high blood pressure, had a stroke or mini-stroke, diabetes, or heart failure
- Have had two or more episodes of atrial fibrillation (irregular heart rhythm)

What will be required?

- Perform holter monitoring at home and assist with transmission of information
- Answer questionnaires
- Attend clinic visits for two to five years
