HEART ATTACK

Penn State Milton S. Hershey Medical Center researchers are seeking volunteers to help compare the safety and effectiveness of the Angel Medical Guardian System—an implantable cardiac monitoring and alerting system that is designed to warn cardiac patients of potentially life-threatening heart conditions—with the standard of care in the treatment of patients at high risk of heart attacks. Participants will have office visits, and undergo exercise stress tests and EKGs.

You may be eligible to participate if you:

- are age 21 or older
- have had high-risk chest pain and/or a heart attack within in the past six months
- have already had a heart catheter and/or artery opening procedure
- live within sixty minutes by EMS to any hospital.

To see if you are eligible,

please contact Dena Jefferson 717-531-5967.
