

Automatic Spell Check is not Working

When users upgrade just Outlook, not the whole Microsoft Office Suite, automatic spell-check may not work properly. Outlook does not know where to look for Word as its editor, since it is also looking for Word 2010.

To fix this issue:

1. Browse to the folder **C:\Program Files\Microsoft Office\Office12**
2. Copy the **Winword.exe** file. Make sure that you copy, not move the file or there could be other issues.
3. Browse to **C:\Program Files\Microsoft Office\Office14**
4. Paste the Winword.exe file.
5. Close Outlook and open it again.
