Autistic child?

Researchers at Penn State Milton S. Hershey Medical Center are studying the safety, tolerability, and effectiveness of a digestive enzyme to treat Autism Spectrum Disorder (ASD).

Participation includes a physical exam; being given the study enzyme or a placebo (a pill with inactive ingredients); and questionnaires. There is no blood draw.

Children with autism may be eligible if they:

- are age 3-8,
- meet the study criteria for ASD (the study will test),
- have low levels of certain pancreatic enzymes (the study will test to verify).

Compensation is provided.

For more information, call Julie Vallati, L.P.N., at 717-531-5656.

Study director:
Jeanette Ramer, M.D., Associate Professor Pediatrics

This research study has been approved by the Institutional Review Board, under federal regulations at Penn State Hershey Medical Center, Penn State College of Medicine.
